

## General Description

The SG3525-100 is a monolithic integrated circuit that includes all of the control circuits necessary for a pulse width modulating regulator. There are a voltage reference, an error amplifier, a pulse width modulator, an oscillator, an under voltage lockout, a soft start circuit, and the output driver in the chip.

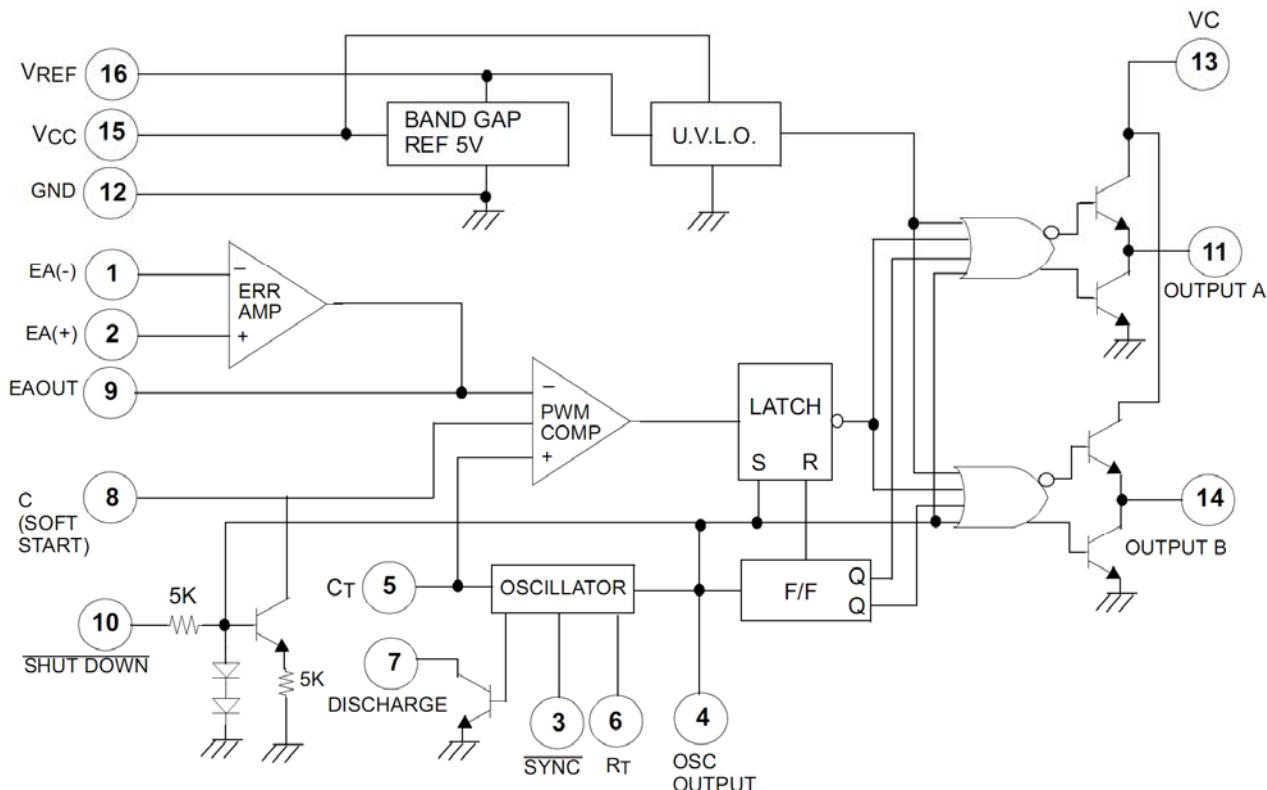

SG3525-100 is available in DIP16 package.

## Features

- 5V  $\pm 1\%$  Reference
- Oscillator Sync Terminal
- Internal Soft Start
- Dead Time Control
- Under Voltage Lockout
